

Retrieving additional product data

The module will be synchronising basic product information from Magento to Copernica. If you want to have all product data, or want to work with the most up to date data in your e-mail template you can fetch all the product data by simple calling an URL which returns the data as XML in your Copernica e-mail template. This URL can be called in two different ways, by using the Magento product id, or the SKU of the product.

Example URL's

Example URL calling by product ID, where you replace {product_id} with the ID of the product withing Magento:

```
http://www.webshopdomainname.com/index.php/copernica/product/xml/?id={product_id}
```

Example URL calling by SKU, where you replace {sku} with the ID of the product withing Magento:

```
http://www.webshopdomainname.com/index.php/copernica/product/xml/?id={sku}&identifier=sku
```

Example Return

All product data is returned as XML. A sample result can be found below:

```
<products xmlns:xlink="http://www.w3.org/1999/xlink">
<product xlink:href="http://www.webshopdomainname.com/index.php/copernica/product/xml/id/29/" xlink:title="
