

# Selling in multiple store views and languages

You can start selling your YourSurprise products in multiple stores, countries and languages. The module will [import](#) the products in the global scope of Magento. You can edit the products and change any setting on store specific level, for instance product name, description, price, etc. The module will not update these store specific settings.

## Beste practice

When selling your products in multiple stores, countries or languages it's best to change the [product import setting](#) "Product status" to "disabled". This will make sure that new products will not automatically be available in your store. This way you can change the product for the specific stores and enable it when the product is ready to be sold.
