Installation

Installing the module

Navigate to the Magento root directory in a terminal and execute the following command:

```
composer require creaminternet/module-postnl
```

Enabling the module

Navigate to the Magento root directory in a terminal and execute the following commands:

```
bin/magento module:enable Cream_PostNL
```

```
bin/magento setup:upgrade
```

```
bin/magento cache:flush
```

Additional steps

In case your shop is running in production mode, it may be necessary to redeploy static content. You can do so by executing the following command:

```
bin/magento setup:static-content:deploy
```
