

Shipping Settings

Automatically create shipments

When this setting is enabled, the module will automatically create shipments on order creation. The shipment will contain all items that were present in the order.

Automatically create labels

When this setting is enabled, the module will automatically create shipping labels when shipments are created. Please note that it is not possible to create letterbox parcels (pakjegemak), multi-collo shipments and pickup shipments in this mode.

Product options

The module provides several shipping methods. You are able to specify which shipping methods are mapped to which [PostNL delivery options](#). Some product options may come with additional costs. Consult your PostNL account manager for more information.
