Version 3.2.4 Release Notes

Cream is pleased to announce the release of the Copernica module for Magento version **3.2.4**, which is a bug-fix and minor feature release. The complete list of fixes is at the bottom of this page.

Release Notices

Upgrading from a previous version of the module should be fairly straightforward. We *strongly recommend* that you install the module in a development or staging environment first before installing it on a production environment.

Updates and Fixes in this Release

- COPE-312 - When ordering a configurable product, only the parent item is now reported.
- COPE-185 - Track & trace information is now reported to Copernica.
- COPE-325 - A recoverable error was fixed that could potentially fill up the logfile.
- COPE-386 - Customers will now properly unsubscribe from newsletters when they were not previously subscribed but still received a newsletter (manually).
- COPE-405 - While saving the database collection the id's of the other collections are now unset. This so that they are retrieved from the new database on the next execution of the cron.
- COPE-407 - The admin storeview is now added as a filter option.
- An issue was fixed involving re-activating canceled orders so they can be used as a cart again.
- COPE-517 - The code style was updated to adhere to Magento's Extension Quality Program.
